- *If SELinux is installed and enabled, please set it to permissive mode.
For temporary “setenforce 0”
For Permanent: edit the “/etc/selinux/config” and set selinux=permissive*

What the installation package does:

Installs required packages and dependencies to support the application

Installs and configure Apache Web Server

Installs MySQL Server, creates database and configures user for database or create database in an existing mysql setup and configures user, requires existing root password.

Setup cron jobs

configure email settings

Steps to install application:

1. Download the OrangeScrum Community Edition Package
2. Copy it to the Server's "/tmp" directory where the application will be installed.
*You can use "Winscp" or "Filezilla" to upload the package to your Server

3. Login to "root" or run "sudo su -", enter the root password:

```
andola@andolasoft:~$ sudo su -  
[sudo] password for andola: 
```

4. Change the directory to "/tmp" by using the following command:

```
root@andolasoft:~# cd /tmp  
root@andolasoft:/tmp# 
```

5. Extract the compressed file, if it is a tar ball file, please run the below step:

```
/tmp# tar xzf os_community-edition-Ubuntu.tar.gz
```

OR

If downloaded from github, zip file will be downloaded, to extract follow the steps:
Install unzip by typing: "**apt -y install unzip**", then unzip the code:

```
/tmp# unzip os_community-edition-Ubuntu.zip
```

6. Change the directory to "orangescrum-master":

```
/tmp# cd orangescrum-master/
```

7. Run the setup.sh file:

```
/tmp/orangescrum-master# ./setup.sh
```

8. During if database is already installed, it will ask for **root password** for MySQL database, else it will ask to setup root password for new installation:

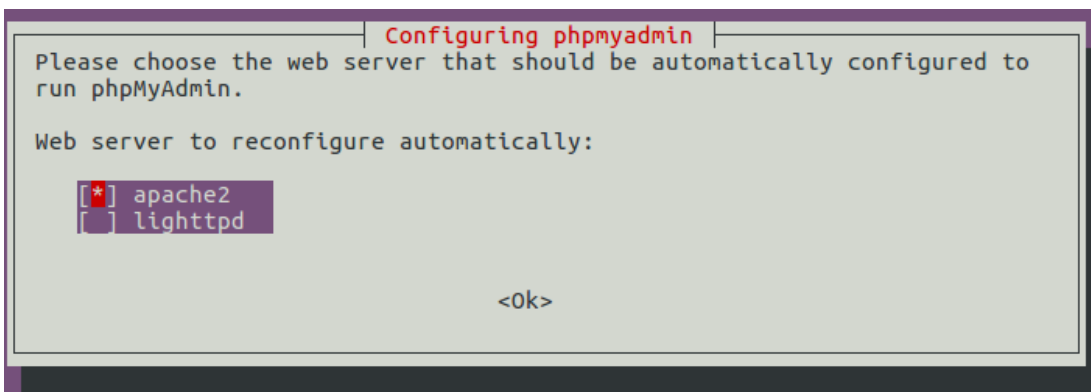

Re-enter the password as per the above given screen-shot.

9. It will ask to setup the phpMyAdmin, please follow the steps:

i. Select "**apache2**" and press "**ok**" to re-configure the Web Server automatically

ii. Select “**Yes**” to re-configure the database for phpMyAdmin with dbconfig-common:

iii. Enter MySQL application password for phpMyAdmin:

10. It will install all the required packages and dependencies and will ask for email ID, Email Password, SMTP mail server address and SMTP port, Domain name or IP address for the Host.
